Set-up

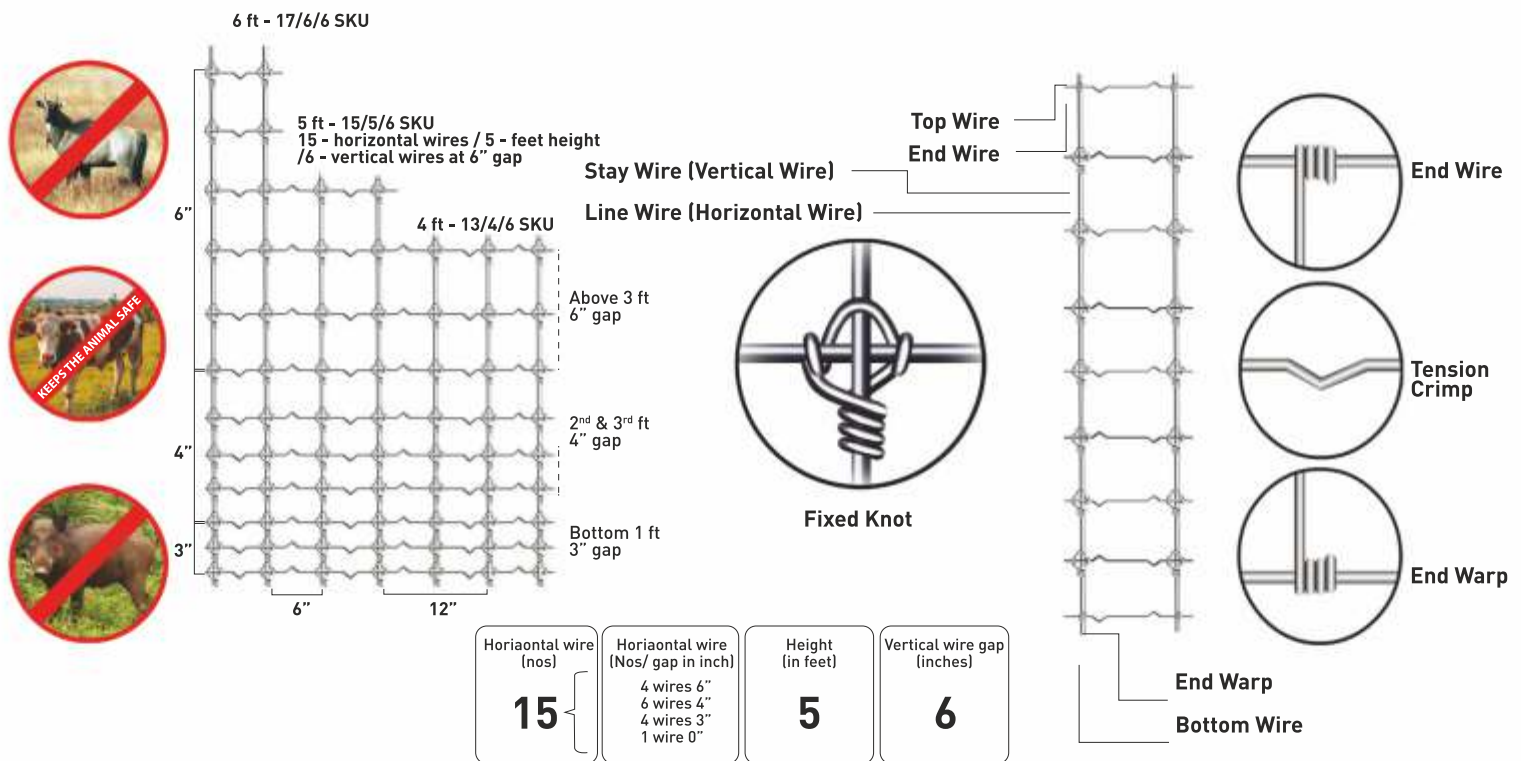

Variable
height and gap

First time in India! Fences with cross lock knots- **KNOTTED FENCE**

KNOTTED FENCE is a special knot. It keeps the fence rigid in bad weather and when animals attack

KEY FEATURES

- 1. STRENGTH:** 2.5 mm high tensile galvanised wire is used
- 2. FIXED KNOT:** Cross lock knot- **KNOTTED FENCE** keeps the fence rigid for longer
- 3. IMPACT RESISTANCE:** Tension crimps in the horizontal wires allow expansion in hot summers and contraction in cold winters. The crimps help create a spring action, so that the Knotted Fence regains its shape after impact
- 4. FLEXIBILITY:** Variable vertical gaps - small gaps at bottom, large gaps at top

ADVANTAGES

- High tensile wire. Allows 20 feet gap between poles. Fewer poles required.
- Faster installation. Less labour required.
- Low maintenance. Remains rigid for longer. Does not sag with time.
- Protects the farm but does not harm the animal.
- Lighter. Variable vertical gap. Smaller gap at bottom, more gap at top.
- Cost saving.
