STUMBH
STEEL FENCE POSTS

Bestfence Stumbh is a durable steel fence post designed as a modern alternative to traditional stone pillars, which are heavy, difficult to handle and can deteriorate over time. With its high strength, corrosion resistance and long-lasting durability, Stumbh provides dependable support for fencing across agricultural, residential, industrial and institutional applications.

Easy to transport and install across different terrains, Stumbh can be used with barbed wire, chain link, knotted wire and other fencing systems. Manufactured to Bestfence's high quality standards and tested for endurance, it offers a stronger, easier-to-install and more durable solution for building fences that last.

Aerodynamic Y-Fin Design

The Y-fin profile provides added strength and stability, helping the fence withstand demanding outdoor conditions.

Customisable for Different Fencing Requirements

Strategically designed hole patterns allow the effective length to be customised and make Stumbh compatible with barbed wire, chain link, knotted wire and other fencing systems.

Bitumen-Coated Corrosion Resistance

Protected with a bitumen coating that helps resist corrosion and supports long-lasting outdoor performance.

Better Lifetime Value

Made from high-quality steel, Stumbh offers excellent scrap value, helping significantly reduce its overall lifetime cost of ownership.

Suitable for All Terrains

Designed for reliable installation across a wide range of ground and terrain conditions.

Available Fence Post Sizes

Main Post Size (ft.)	6	7	8	10
Support Post Size (ft.)	5.15	6.36	7.58	9.50
